Description

Critical Care Radiology will enable readers to develop rapid, accurate diagnoses despite the many difficulties associated with the bedside evaluation, including time constants and the low specificity of chest radiographs and postoperative abdominal studies. Written by an interdisciplinary team of experts in radiology and critical care medicine, this book provides a concise overview of how to use the latest diagnostic imaging technology in the intensive care setting. Each chapter contains brief descriptions of normal and morphologic findings, imaging strategies and techniques, differential diagnoses, and potential complications. High-quality radiographs and CT scans enhance the text throughout.
