ABOUT THE JOURNAL

International journal of health, environment and research is a bi-annual journal introduced in the field of Health and Environmental Sciences to put on record the highest level of research in the field of health and environmental sciences from all over the country and across the globe. The concept of the journal has been designed, keeping in mind, the idea of sharing high quality scientific research in the field of Health and Environmental Science and taking it to a wide range of readers across the world.

The journal shall incorporate contributions to field of research through publication of high-quality research articles, review articles, case reports and short communications in the fields of Medical Sciences, Oral Health Sciences, Nursing, Physiotherapy and Basic & Biological Sciences including Environmental sciences.

The journal shall encourage and promote scientific research and documentation in the field of Health and Environmental sciences across the globe and shall provide an ideal platform to the researchers, to share their work, dedicated to health and environment, which in turn, shall help the mankind by improving the quality of life.

Aim of the journal:

The journal aims to provide opportunity to the researchers in the field of Medical Sciences, Oral Health Sciences, Nursing,

Physiotherapy and Basic and Biological Sciences including Environmental sciences to document their research work in a high quality peer-reviewed journal.

Mission statement:

To serve the researchers and scientists across the globe by prompt publication of their significant research work in the field of health and environmental sciences and thereafter disseminating that knowledge to people all over the world for the betterment of the mankind.

Scope of the Journal:

- The Scope of the journal shall include but not limit to:
- Introduction and utilization of simplified and affordable health care related procedures and associated equipment.
- Supporting research work with potential of affecting human life and environment.
- Emphasize on combating diseases especially those prevalent in developing countries.
- Study the role of Environmental Science on health and lifestyle related diseases.
- Evaluating the role of ecological factors in both Prevention and Therapy of Cancer.
- Reporting health surveys and evaluating their impact on future research work needed in that direction.
