The authors have written lucidly with illustrative diagrams and pictures to narrate the nuances of the fingertip and its pathology.

There are various studies and publications about fingertip injuries and amputations. The book editor J. Terrence Jose Jerome has written a chapter on surgical anatomy and classification of fingertip injuries. This chapter gives a clear understanding of amputations based on anatomical structures and assists in the treatment plan for surgeons.

Infections of the fingertip are a vital topic for learning and effective treatment. A chapter has been dedicated to discussing bacterial, fungal, and other infections of the fingertip. Surgical treatment of these infections in the subsequent chapter briefly discusses the principles, techniques, procedures, and outcomes. Chapters on the management of fingertip amputations comprises advanced state-of-the-art techniques and different reconstructive options for the surgeons to refresh and the aspirants to master from the beginning.
